For those with an occasional need, Exact Metrology rents most of the technology in our line of portable metrology systems. We have rental programs for scanning devices, point cloud processing software and complete systems. Any of these items can be rented by the day, week or month.

Whatever the reason for a rental, we can help you fill the technology gap.

- Try before buying new or pre-owned equipment.
- Too much work for contract measurement services yet too little to own a system.
- Add a piece of specialized technology to supplement in-house 3D scanning or PCMM capabilities.

Exact Metrology sells and implements metrology equipment solutions from industry leading manufacturers. These technologies will quickly and precisely measure items as small as a human hair or as big as a city block.

Exact Metrology utilizes the equipment from these manufacturers on a daily basis in our Contract Measurement Services business, giving us intimate knowledge of each technology. This expertise allows us to help you select the right equipment for your individual needs.

Exact Metrology offers you a range of contract measurement services that use 3D scanners, portable CMMs and long-distance trackers. These technologies will quickly and precisely measure items as small as a human hair or as big as a city block. When the measurements are complete, our team converts the raw data into models, reports and images that give you the answers and results that you need.

Most of our technology is portable, so our team can come to your facility when shipping isn’t an option. We have the tools, talents and technologies to get your project done right. We also use that expertise to select the best solution for your application, which can save you time and money.
